To whomever it may concern

**Re: MTRE CritiCool system**

I am using in my department the MTRE Advanced Technologies, CritiCool system. During the last years we have used the system for cooling therapy of about 100 cases, of patients after cardiac arrest.

When I used the CritiCool with the disposable CureWrap, I was able to decrease patient temperature to 33 0C (Hypothermia) as well to maintain the temperature for 24 hours.

The CritiCool system is an effective, non invasive method for managing a patient Hypothermia and thermoregulation

If you need further information don't hesitate to contact me

Attached please find papers / presentation on our experience

Best Regards
